

INTERNAL TRAINING & OPERATING GUIDE

Central Accounts

Training Manual

From source documents to postings, reconciliations, statutory controls, close and reporting

Training objective

Enable a new finance user to understand what each Central Accounts screen does, complete routine work safely, recognize when approval is required, and preserve a complete audit trail.

Prepared for: Accounts Executives, Accounts Managers, CFO/CA reviewers, authorised auditors and system administrators

Version 1.0 • 20 July 2026 • Varada Nexus Private Limited

System reference: EMS 2.0 release/2.0-rc1

1. How to use this manual

Read sections 1–6 before posting any transaction. Use sections 7–15 as operating references for the area assigned to you. Complete the closing checklist in section 16 at month-end.

Important control

Central Accounts is a controlled ledger workspace. A document should be posted only after the source is approved, the accounting treatment is verified, the period is open, supporting evidence is available and the debit/credit effect is understood.

Learning outcomes

- Navigate all Central Accounts workspaces and understand what belongs in each one.
- Trace an approved source transaction into a financial document, posting queue item and journal.
- Maintain receivables, payables, treasury, tax, fixed asset and budget records without bypassing approvals.
- Prepare close evidence and reliable reports while keeping the audit trail intact.
- Recognize errors that must be corrected before posting instead of being hidden after posting.

The three rules to remember

Rule	Meaning in daily work
Source first	Every posting must be supported by an approved source document, authorised voucher or properly documented adjustment.
Maker and checker	The person preparing data should not silently approve or post their own work when separate review is required.
Never erase history	Correct mistakes through the approved correction, reversal or adjustment route; do not attempt to hide the original event.

2. The complete accounting flow

Understand the sequence before learning individual screens.

CENTRAL ACCOUNTS CONTROL FLOW

Figure 1 — Central Accounts control flow

1. Source: A division approves a bill, invoice, credit note, receipt, transporter statement, payment, expense or other eligible transaction.
2. Stage: EMS creates a Central Accounts financial document without yet changing the final journal ledger.
3. Validate: Finance checks document family, amount, date, counterparty, tax treatment, dimensions and queue status.
4. Post: An authorised user confirms posting. EMS creates a balanced journal and updates relevant open items.
5. Reconcile: Finance compares receivables, payables, bank movements, GST, TDS and division balances to supporting records.
6. Close and report: Review evidence is completed, the period is controlled or locked, and reports are issued from posted records.

What posting means

Posting is the moment the transaction becomes part of the accounting books. Review before you press Post. A successful toast and changed queue status are the expected system confirmation.

3. Access, roles and navigation

Figure 2 — Central Accounts Dashboard and sidebar

The dashboard is the starting point. The left sidebar groups the module by the job being performed, while the control hub shows current posting health.

- Home: Dashboard and Audit Events.
- Accounting Operations: Financial Documents, Posting Queue, Journals and Manual Vouchers.
- Working Books: Receivables, Payables, Treasury and Fixed Assets.
- Statutory & Controls: GST, TDS, Annual Tax, Close Controls and Tax & Company Settings.
- Financial Reporting: Reporting, Consolidated Books and Budgets & Profitability.

Typical responsibilities

User type	Typical work	Control expectation
Accounts Executive	Prepare masters, records, reconciliations and supporting evidence.	Normally creates/edits; posting and approval depend on assigned permissions.
Accounts Manager	Reviews treatment, approves controlled items, posts where authorised and supervises close.	Checks source, tax, dimensions and balances before approval/posting.
CFO / CA reviewer	Reviews financial statements, statutory positions, major adjustments and close readiness.	Challenges exceptions and approves only with sufficient evidence.
Auditor	Examines records, evidence, events and reports according to granted rights.	Must not alter operational records unless explicitly authorised.
Administrator	Maintains access and technical configuration.	System access does not replace accounting approval.

Permission-aware interface

Buttons appear only when your role has the required View, Create, Edit, Approve, Post, Reconcile or Export action. If a button is missing, do not share another user's login; ask an administrator to review your assigned permissions.

4. Dashboard: start-of-day control check

At the start of each work session, use the dashboard to decide where attention is needed. The figures are control signals, not a replacement for ledger review.

Indicator	What it tells you	Action
Ready To Post	Validated documents waiting for authorised posting.	Open Posting Queue; review oldest and highest-risk items first.
Posted	Documents successfully posted to the ledger.	Use Journals and reports to verify the resulting entry.
Failed	Posting attempts that did not complete.	Read the error, correct the underlying issue, and retry only after review.
Financial Documents	Total staged/posted accounting documents in scope.	Use filters to locate a source item and inspect its details.
Receivables / Payables	Current open customer/vendor exposure shown by the dashboard dataset.	Reconcile against working books and source division records.

Do not rely on colour alone

Always read the status text and amount. A zero balance may mean there are no posted open items, not that every source division has completed its billing workflow.

5. Financial Documents: verify the staged source

Financial Documents
Review staged and posted Central Accounts documents

Division Scope: Finance

Filters

Search document no / family: All Statuses: All Families:

DOCUMENT NO	FAMILY	STATUS	DATE	COUNTERPARTY	NET AMOUNT
TP/26-27/0001	TRANSPORTER_PAYMENT	ready_for_posting	2026-07-10	BHANU MODIUM	₹: 100000
CR/26-27/0001	CLIENT_RECEIPT	ready_for_posting	2026-07-10	ravi dwaram	₹: 100000
TSTAT/260710/001	TRANSPORTER_STATEMENT	ready_for_posting	2026-07-10	BHANU MODIUM	₹: 100000
CR/26-27/0002	CREDIT_NOTE	ready_for_posting	2026-07-10	ravi dwaram	₹: 100000
INV/GB/26-27/01	CLIENT_BILL	ready_for_posting	2026-07-10	ravi dwaram	₹: 100000

Figure 3 — Financial Documents register

This register is the bridge between approved operational documents and the accounting ledger. Use it to confirm what EMS intends to post.

- Search by document number or family and filter by status.
- Review document family, date, counterparty/dimension and net amount.
- Open View to inspect queue context, posting sequence and the full record payload.
- Do not post from this screen; posting occurs in Posting Queue after review.

Document families you may see

Family	Business meaning	Likely accounting effect
CLIENT_BILL / GST_INVOICE	Amount billed to a customer.	Revenue, output tax and receivable.
CLIENT_RECEIPT	Money collected from a customer.	Bank/cash increases and receivable reduces.
CREDIT_NOTE	Reduction or correction to customer billing.	Revenue/tax and receivable adjustment.
TRANSPORTER_STATEMENT	Approved transporter/vendor liability.	Expense/input tax and payable.
TRANSPORTER_PAYMENT	Settlement of a transporter/vendor balance.	Payable reduces and bank/cash reduces.
INTERIOR_BILL / division invoice	Approved bill from another EMS division.	Configured revenue/tax/receivable treatment.

Pre-post validation

- The source document number exists and matches the approved division record.
- The document date and accounting period are correct and open.
- The counterparty and reporting division/dimension are correct.
- Taxable value, GST/TDS components and net amount agree with the source.
- Required evidence is attached or referenced and there is no unresolved exception.

6. Posting Queue: create the accounting entry

Figure 4 — Posting Queue

The Posting Queue shows documents that are ready, processing, posted or failed. Only users with Post permission receive an active Post button.

- Ready To Post means the item is eligible for a posting attempt; it does not remove the reviewer's responsibility.
- Posting Sequence is the traceable link used to connect the document, posting job and journal.
- Failed items require diagnosis. Repeated clicking is not a correction method.
- EMS asks for confirmation before executing the posting.

Safe posting procedure

7. Filter to Ready To Post and locate the intended source document.
8. Return to Financial Documents and verify its family, amount, date, counterparty and queue context.
9. Confirm the source division has approved the transaction and no later cancellation or revision exists.
10. Check the accounting period, tax treatment and expected debit/credit impact.
11. Select Post once and confirm the system prompt.
12. Wait for the success message and refreshed queue status.
13. Open Journals and verify the resulting entry is balanced and carries the correct reference.

If posting fails

Record the exact error and source document. Check missing account mappings, closed periods, invalid status, duplicated posting, unbalanced lines or missing master data. Correct the cause, then retry once. Escalate repeated failures to the Accounts Manager/system administrator.

7. Journals and Manual Vouchers

Figure 5 — Manual Voucher entry and register

Use Manual Vouchers only for authorised accounting entries that do not originate from a normal source workflow, such as accruals, provisions, prepaids, opening entries and documented adjustments.

- Choose the voucher type and date, then select the relevant division or company scope.
- Provide a meaningful reference and narration that another reviewer can understand.
- Add at least two lines and keep total debit exactly equal to total credit.
- Submitted vouchers move through approval and posting according to permissions.

Voucher types

Type	Use it for
journal / adjustment	General reclassification or supported correcting entry.
payment	Authorised payment entry not already generated by a controlled source workflow.
receipt	Authorised receipt entry not already generated by the receivable workflow.
contra	Transfer between cash/bank accounts.
accrual / provision	Recognising an expense or liability before final settlement.
prepaid	Recording or releasing expenditure relating to a future period.
opening	Controlled opening balances during implementation or approved migration.

Journal register

The Journals screen is read-only and provides header/line drill-down. A valid journal must have equal debit and credit totals. Use the journal number and source reference when investigating balances.

8. Receivables and Payables

Payables
Read-only payable working book with aging snapshot

VARADA NEXUS Chat

Figure 6 — Payables and vendor accounting

Payables combines vendor master setup, purchase bill entry, vendor advances, approvals/posting and the open-item working book. Receivables is a read-only customer collection working book derived from posted items.

- Vendor setup: vendor code, legal name, GSTIN/PAN and payable account.
- Purchase bill: vendor, division, dates, expense/input-tax/payable/TDS accounts and tax breakup.
- Advance: vendor, date, amount and traceable reference.
- Working books: original amount, open amount, due date, status and aging buckets.

Purchase bill entry — field guidance

Field	How to complete it
Vendor / Bill No	Select the correct vendor and enter the invoice number exactly as shown on the supplier document.
Bill Date / Due Date	Use the supplier invoice date and contractual due date.
Expense Account	Choose the account that represents the nature of the goods or service.
Input Tax Account	Use only when GST input credit is eligible and supported.
Payable Account	Select the vendor liability/control account configured for AP.
TDS Payable Account	Use when tax is deducted and payable to the government.
Taxable / CGST / SGST / IGST	Copy from the valid tax invoice and verify intra-state versus inter-state treatment.
TDS / Total	Check the deduction and invoice total; ensure the settlement amount agrees with the bill terms.

Aging interpretation

Aging buckets group open balances by how long they are past the due/reference date: 0–30, 31–60, 61–90 and 90+ days. Use aging to prioritise collections, payment scheduling and exception follow-up.

Reconciliation rule

The working book must reconcile to the relevant control-account balance in the general ledger. Investigate timing, unposted documents, partial settlements, credit notes, advances and incorrect counterparty dimensions.

9. Treasury and bank reconciliation

Figure 7 — Treasury workspace

Treasury manages cash/bank accounts, statement imports and reconciliation. The aim is to explain every bank line with a ledger movement or a documented exception.

- Use filters to focus on a treasury account, date range or reconciliation status.
- Review book balance, statement balance and difference before signing off.
- Match bank statement lines to ledger movements; do not force a match when amount/date/reference do not support it.
- Generate or retain the reconciliation certificate and reviewer evidence when the period is complete.

Bank reconciliation procedure

14. Confirm the treasury account is the correct bank/cash account and its opening/book balance is reasonable.
15. Import or review the bank statement for the exact period without duplicate lines.
16. Match receipts, payments, bank charges, interest and transfers using amount, date, reference and counterparty.
17. Record legitimate book adjustments through the correct controlled entry; never alter a bank statement line to make it fit.
18. Classify unmatched items and assign follow-up ownership.
19. Verify the statement balance, book balance and reconciliation difference.
20. Complete review evidence and obtain the required approval/reconciliation sign-off.

10. GST compliance and company tax settings

Figure 8 — GST Compliance

GST Compliance brings together registration periods, classified documents, exception handling, GSTR-2B matching and input-tax-credit review. The system does not guess missing tax classifications.

- Select the correct GST registration and return period.
- Review every classification or reconciliation exception.
- Check taxable value and CGST/SGST/IGST/cess against the source invoice.
- Review GSTR-2B match status and whether ITC is available or blocked.
- Lock books only after reconciliation and review are complete.

Notes

[Save Company Profile](#)

[VARADA NEXUS Chat](#)

Figure 9 — Tax & Company Settings

Tax & Company Settings is the master-data foundation for statutory workflows. It stores company identity, PAN/TAN/CIN, registered address, financial-year basis, auditor details and state-wise GST registrations.

- Enter legal identifiers exactly as issued by the relevant authority.
- Maintain one row for each GST registration and mark only one appropriate active registration as primary.
- The page validates PAN and GSTIN formats but format validation is not proof that a registration is legally valid.
- Deactivation is controlled and audited; do not deactivate a registration with unresolved filing obligations.

GST review order

21. Registration and filing period
22. Outward invoices and credit notes
23. Input documents and eligibility
24. CGST/SGST versus IGST classification
25. GSTR-2B match exceptions
26. Tax ledgers, payment/offset and filing acknowledgement

Professional review

GST classification, ITC eligibility and return filing require review by the responsible Accounts Manager/CA. EMS supports preparation, reconciliation and evidence; it does not replace statutory judgement.

11. TDS and Annual Tax & Audit

TDS Compliance

Maintain deductees and TDS sections before recording deductions. For each deduction, link the deductee, applicable section, optional purchase bill, deduction date, taxable amount, rate, TDS amount, return period and challan reference.

Control	What to verify
Deductee identity	Legal name, PAN, GSTIN where applicable and deductee type.
Section and rate	Correct statutory section, threshold, default/lower deduction rate and supporting certificate.
Deduction timing	Correct date of credit/payment and return quarter.
Challan linkage	Payment challan number and amount agree with deductions included.
Return / certificate	Quarterly return status, validation errors and certificates are tracked.

Annual Tax & Audit

Use the statutory filing calendar for GSTR-1, GSTR-3B, GSTR-9/9C, ITR, tax audit 3CD, TDS returns, advance tax and other obligations. Use Annual Audit Workpapers to record the financial year, section, title, amount, status and evidence reference.

Evidence discipline

Every filing marked complete should carry its acknowledgement/ARN and evidence link. Every significant annual-tax adjustment should be supported by a workpaper that another reviewer can reproduce.

12. Fixed Assets, budgets and profitability

Fixed Assets

The asset register captures asset code/name/class, owning division, acquisition and put-to-use dates, vendor/purchase bill, cost, salvage value, useful life and depreciation method. Movements record capitalization, transfer, impairment, revaluation, disposal or scrapping.

Depreciation runs progress from draft/prepared to approved and posted. Before posting, select the correct depreciation expense and accumulated depreciation accounts and confirm the run total agrees with the asset schedule.

Budgets & Profitability

Create a budget by financial year, division, scenario and status. Add lines by ledger account and period. Capture profitability snapshots to preserve a dated view of revenue, direct cost, indirect cost, gross margin and net margin.

Scenario	Use
base	Approved operating expectation.
optimistic	Upside scenario with documented assumptions.
conservative	Downside scenario for risk planning.
reforecast	Updated expectation based on actual performance and new information.

Comparison control

Actual profitability is sourced from posted/approved accounting records. A budget or snapshot does not change the ledger; it is a planning and analysis layer.

13. Close Controls

Figure 10 — Close Controls

Close Controls turns month-end into an owned, evidenced checklist. Create one checklist per month, link the accounting period, assign tasks, track status and lock only after review.

- Checklist statuses: open, in progress, ready for review, closed or reopened.
- Task statuses: pending, in progress, completed, reviewed, blocked or not applicable.
- Each task should have an area, owner, due date, status, evidence reference and useful notes.
- Lock Close and Reopen are approval-level actions; reopening must be justified and reviewed.

Minimum close areas

Area	Minimum completion evidence
Source completeness	All divisions confirm approved bills, credit notes, receipts, statements and expenses are sent to Central Accounts.
Posting queue	No unexplained ready, processing or failed items remain.
Receivables / Payables	Open-item books reconcile to control accounts; aging exceptions have owners.
Bank / Treasury	All bank accounts reconciled and certificates/evidence retained.
GST / TDS	Registers reconciled, exceptions documented and filing/payment status updated.
Fixed assets	Additions, disposals, transfers and depreciation reviewed and posted.
Journals	Manual and automated journals reviewed for balance, narration, references and unusual entries.
Reports	Trial balance and financial statements reviewed; material variances explained.

14. Financial Reporting and Consolidated Books

Figure 11 — Central Accounts Reporting

Reporting is built from existing journals, financial documents, open items and treasury movements. It does not create a duplicate ledger.

- Choose the required period, division and report section before interpreting results.
- Use CSV for analysis, PDF for a fixed record and Print for controlled paper/save-to-PDF output.
- Check report totals against the journal/trial balance before external circulation.
- Keep generated date, filters and reviewer sign-off with formal reporting packs.

Reports and review questions

Report	Reviewer question
Trial Balance	Do total debits equal total credits, and are unusual account balances explained?
Profit & Loss	Are revenue/cost classifications correct and material movements explained?
Balance Sheet	Do control accounts, taxes, bank, assets and equity reconcile to schedules?
Receivables / Payables	Do open items and aging agree with control accounts and source parties?
Cash / Treasury	Do book balances reconcile to bank statements and certificates?
Division profitability	Are reporting dimensions complete and allocations documented?

Consolidated Books provides a company-wide document view across divisions, with document previews and downloadable PDFs where available. Use it to trace bills, receipts, payments and postings without switching repeatedly between source modules.

15. Audit trail and control evidence

Audit Events is the investigation workspace. Search by event, actor, source document, financial document or journal reference. Each event records when it occurred, who performed it and the metadata available for that action.

The Auditor Workspace can maintain audit requests and maker-checker/control evidence. Requests include request number, year, area, title, due date, status and description. Control evidence records control code/area, period, entity, maker/checker actions and evidence status.

Evidence status	Meaning
captured	Evidence has been recorded but may still require review.
exception	A control failure, missing evidence or unexplained condition requires action.
reviewed	An authorised reviewer has examined the evidence.
remediated	The exception was corrected and the resolution is documented.

Good narration test

A reviewer unfamiliar with the transaction should be able to understand what happened, why it was authorised, which source supports it, who checked it and how the final balance was verified.

16. Month-end operating checklist

#	Check	Completion standard
1	Cut-off confirmed	All divisions have submitted approved transactions for the period; late items are identified.

#	Check	Completion standard
2	Posting queue cleared	Ready/processing/failed items are posted or documented with owner and resolution date.
3	Journals reviewed	Automated and manual entries are balanced, referenced and approved.
4	AR/AP reconciled	Working books agree with control accounts and aging exceptions are assigned.
5	Bank reconciled	All accounts reconcile; unmatched items and adjustments are evidenced.
6	GST/TDS reconciled	Registers, returns, challans, ITC and exceptions are reviewed.
7	Assets completed	Additions, disposals, transfers and depreciation are posted.
8	Management review	Trial balance, P&L, balance sheet and division results are reviewed.
9	Evidence archived	Close tasks contain links/references to support and reviewer sign-off.
10	Period controlled	Checklist is ready for review and lock/close is performed by an authorised approver.

Reopening a close

Reopen only when a material correction is required. Record the reason, responsible approver, affected entries and the checks repeated after correction.

17. Troubleshooting and common mistakes

Problem	Likely cause	What to do
Post button missing	No Post permission or item is not ready_to_post.	Check role permissions and document/queue status; never borrow credentials.
Posting failed	Missing mapping, closed period, invalid status, duplicate or unbalanced treatment.	Read the error, correct the cause, retain evidence and retry once.
Document not in queue	Source not approved/bridged, already posted or filtered out.	Verify source workflow, clear filters and inspect Financial Documents.
AR/AP differs from ledger	Unposted items, timing, credit notes, advances, partial settlements or wrong dimension.	Reconcile item-by-item to source and journal references.
GST exception remains	Tax breakup/classification/registration or 2B match is incomplete.	Review source invoice and statutory eligibility; obtain CA review where needed.
Bank difference	Unmatched statement item, duplicate import, missing book entry or timing difference.	Investigate; record a valid adjustment only with approval and evidence.
Report looks incomplete	Filters, period, division or unposted data.	Confirm report parameters and posting completeness before exporting.
Button/action unavailable	Page is permission-aware.	Ask an administrator to grant the correct action to your role if business-authorised.

18. Glossary

Term	Plain-language meaning
Financial document	The Central Accounts representation of an approved source transaction.
Posting queue	The controlled waiting area before a transaction changes the ledger.
Journal	A balanced set of debit and credit lines recorded in the books.
Ledger account	The account used to classify assets, liabilities, income, expenses or equity.
Reporting dimension	A division, counterparty or other attribute used to analyse a posting.
Open item	An unpaid or partly settled receivable/payable balance.
Aging	Grouping open balances by the time elapsed from their due/reference date.
Reconciliation	Proving that two related records or balances agree, with explanations for differences.
ITC	Input Tax Credit, subject to statutory eligibility and evidence.
TDS	Tax Deducted at Source, tracked by deductee, section, challan and return period.
Close	The controlled completion and locking of an accounting period after review.
Maker-checker	Separation between the preparer and the reviewer/approver of controlled work.

Training sign-off

Before receiving posting or approval rights, the trainee should demonstrate one supervised document review, one posting trace, one reconciliation walkthrough and one close-control task with evidence.

Trainee	Trainer	Date	Outcome
			Competent / Further training required

Scope and disclaimer

This manual explains how the EMS Central Accounts module is designed to be operated. It is not tax, audit, legal or accounting advice and does not override company policy, statutory requirements or professional judgement. Screen actions remain controlled by the user's assigned permissions.
